

Agni

Agni is a Bash-based subdomain discovery script designed for Bug Bounty reconnaissance. It automates the process of subdomain enumeration and live host detection using the community tools.

Installation

1. Clone the repository: `git clone https://github.com/kalih4cker/agni.git`
2. Change the directory: `cd agni`
3. Make the script executable: `chmod +x *.sh`
4. Run agni.sh: `./agni.sh example.com`

Contributions

Contributions and pull requests are highly encouraged for this project. Contributions are what make the open-source community such an amazing place to be learn, inspire, and create. Any contributions you make are greatly appreciated.
