Burp suite

This script will send all the parameter to brupsuite directly

Parameter.txt

Find out parameter URLs using Wayback URLs, Paramspider etc., for your target and save it in txt file you can filter the running URLs using HTTPx or HTTProbe

Windows

save the Bat file in windows and use cmd prompt with parameter.txt file

CMD: file.bat parameter.txt

Linux

Save this code into a file, e.g., curl.sh

Make it executable:

`chmod +x curl.sh`

`./proxy_curl.sh file.txt`

Note: If the .sh file didn't work use this "dos2unix curl.sh"
